

SCANeRTM studio

Simulation Engine

New generation of software solution for Virtual Testing and Driving

- Test and validation of advanced driver assistance systems in driving conditions
- Design and validation of headlight and tail light optical and electronic systems both in static and driving conditions
- Research on the impact of the road infrastructure and the environment on the driver's behavior
- Test and validation of man/machine interface of the vehicle dashboard and console equipments
- Design and test vehicle architectures
- Test and validation of vehicle interiors in driving conditions
- Research or marketing simulators for proof of concept or corporate communication

According to your application, package your own SCANeRTM studio configuration
